Subject: IECC & Chapter 11 of the IRC using the ICC standards process

Hello ICC:

Just a quick note of support for updating of the IECC and Chapter 11 of the International Residential Code (IRC) using the ICC standards process.

As someone familiar with the evolution of the IECC and Chapter 11 of the IRC, the future development of energy conservation provisions should follow the ICC standards process as accredited by ANSI. Currently there are several consensus committees indirectly related to energy systems/conservation - i.e., solar thermal. It makes complete sense to have a well rounded committee roster with industry, government and public representation to develop future editions of the IECC. Thank you for the opportunity to comment on this matter.
